Kalinga Eye Hospital

An ISO 9001:2015 Certified Hospital

MESSAGE FROM THE FOUNDER CHAIR

From its humble origin, Kalinga Eye Hospital and Research Centre (KEHRC) has reached a pre-eminent position in eye care sector during the past eighteen years of service delivery. It is a quality and customer oriented hospital with a global vision and reach. We achieved by combining available talent and technology, as part of an integrated eye care system managed by a committed medical team.

The past year has been one of concentration on quality and systems improvement. Meanwhile routine activities and our march along the growth path continued. Physically, we continued to grow, both in expanding facilities in many of our vision centers as well as extending our footprint into newer geographical areas. I am delighted with our transition to the IHMS system. Since the inception of our hospital, we have been rigorous in medical record documentation.

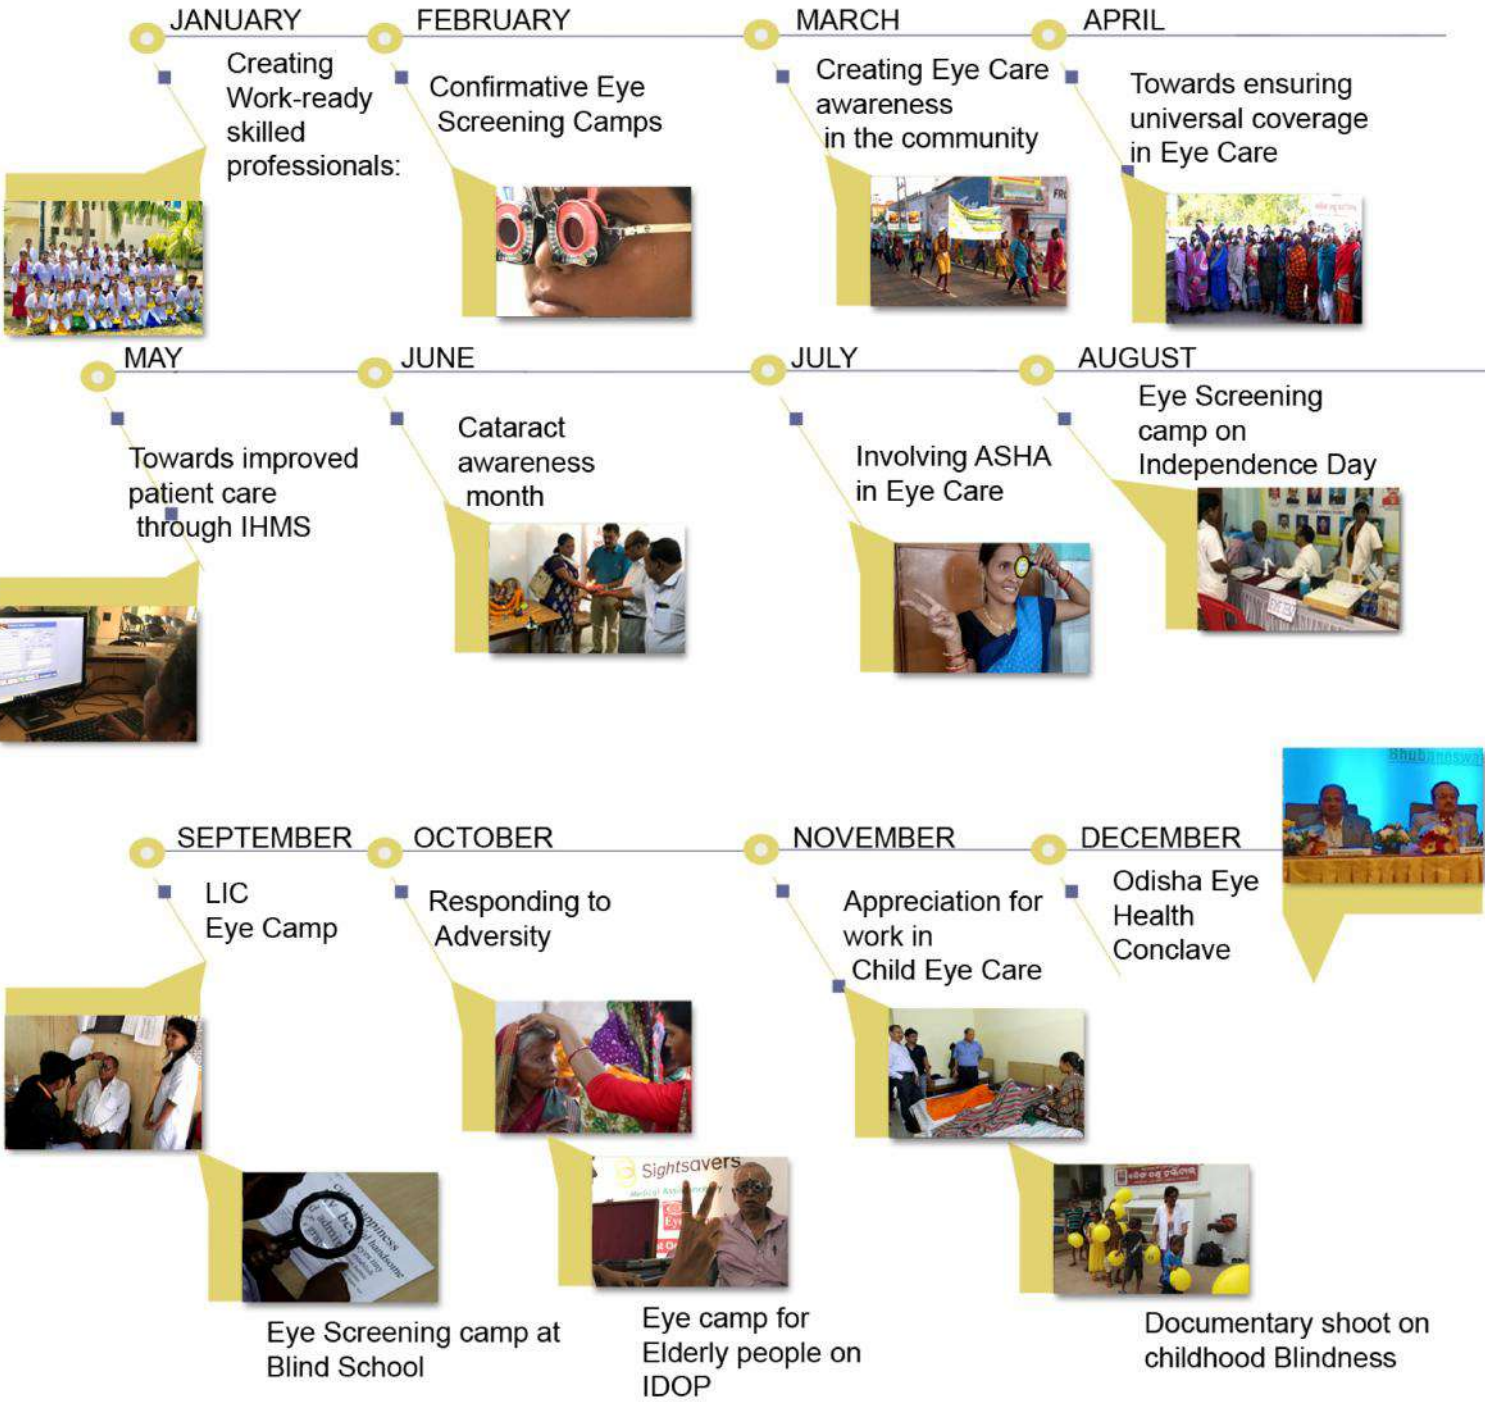

To many supporters who helped in diverse ways, we owe a debt of gratitude. This was achieved through the unique partnership between local and international NGOs, individual philanthropists and the government.

Progress for me has never been a dream. It has always been a distant reality and once one milestone is achieved, there is always another one waiting to be crossed. It is with this belief that I started overcoming challenge after challenge with the support of my brilliant team. The journey of KEH is never ending. But with the support of my team and clients, I am confident that the hospital will continue to scale milestones of excellence for years to come.

Dr. Sarangadhar Samal

Odisha Eye Health Conclave

Kalinga Eye Hospital and Research Centre, Dhenkanal had collaborated with Rotary club Bhubaneswar heritage to organize one day Odisha Eye Health Conclave 2019 on 1st of December 2019 at Hotel Padmaja, Chandra sekharpur, Bhubaneswar. The conclave was organized with objectives of : sharing the good practices with the representatives of other eye care service delivering agencies; discussing the issues and challenges confronted by the agencies while discharging eye care services and finally to devise a roadmap for moving forward in the mission of achieving Universal Eye Health by 2022.

A total of 160 participants had participated in the day long discussion on eye care service delivery in Odisha. The participating members represented from various walks of life as – The Rotarians, members of organizing committee, Professionals and personnel from different eye hospitals, media groups, and other elite groups.

The conclave was graced by dignitaries like - Dr. Suvendu Das, Former President of Rotary club of Bhubaneswar heritage, Mr Sarangdhar Samal, Director and Founder of KEH, Mr Akbar Mehfuz Alam, State Programme Manager, Sightsavers India; Rtn.Niranjan Sahoo, IAS, Chairman of eye health committee and

labor commission of Odisha, Rtn. Vinod Kumar (IFS, Convener of eye health committee), Dr Sandip Kumar Tripathi (IFS, PCCF and Head of Forest Force, Govt of Odisha etc. The dignitaries had spoken on the issues and challenges and replicable models of eye care services. The participants representing from various eye hospitals, presented the hindrances of non/late reimbursement of fund by DBCS, area confinement to NGO run hospitals for outreach, tedious process of hospital registration etc. The participants in the last session chalked out the action points of- replicating the successful models of community eye care, responsibilities to be assigned to grass root functionaries for screening & referral and reward system, eye care under insurance coverage, online data base creation, involvement of media, formation of state level consortium etc.

The proceedings/recommendations of the day long discussion have been submitted to the Principal Secretary, Health dept for further action.

Appreciation for work in Child Eye Care:

Paediatric Eye Surgery requires special equipment, instrument and trained manpower and Kalinga Eye Hospital, Dhenkanal is now the second only leading Eye institute having Paediatric facilities. Government has already taken initiatives to empanel Kalinga Eye Hospital with the state Rasthriya Bal Swasthya Karyakrma (RBSK), so that children identified with different ophthalmic ailments can be referred to the centre for treatment at free of cost to the identified children. Though the empanelment is taking some time; so some philanthropy agencies have joined hand with Kalinga Eye Hospital to help these identified children who are in need of surgical interventions to restore their lost vision. On 4th of November 2019, Kalinga Eye Hospital has conducted surgery on 7 children who were suffering with congenital bilateral cataract and these children have

able to see the world even the faces of their parents for the first time since their birth. Heard this noble work, the District Collector and Magistrate of Dhenkanal Sh Bhumesh Chandra Behera has visited the Hospital on 5th November 2019. During his visit, Sh Behera has interacted with the patients, parents of the operated patients and appreciated the efforts of Kalinga Eye Hospital in child eye care.

Cataract awareness month

Cataract awareness month was observed from 1st

June to 30th June 2019, by Kalinga Eye Hospital & conducted cataract awareness programme throughout the month. The programme was facilitated by the Chairman Dr Sarangadhar Samal, the Medical Director Dr. Chandra Sekhar Sahoo. Principal and the Chief Medical Officer Dr Rasananda Garnayak. Awareness was done regarding occurrence, risk

factors, management and potential complications of cataract &, video demonstration of surgical procedures was also displayed to the patients & the public. Free pamphlets consisting information in Odia regarding cataract and its management were distributed to the patients and their relatives. On 27th of June 2019, a special programme was conducted where senior citizens, differently able and transgender were invited for their eye check up. The event was inaugurated by the DSSO, Angul Sh Madhab Baral and by the DPM-NPCB, Dr Abhimanyu Acharya. On that itself 178 persons were screened on the day from which 43 were diagnosed with Cataract, 99 were provided with spectacles and 77 were provided with free medicines. Around 1092 patients were screened during the month for the condition of cataract and 225 patients underwent cataract surgery & benefited from the cataract awareness camp.

Creating Work-ready skilled professionals:

The Healthcare Sector Skill Council (HSSC) is a Not-for-Profit, Non- Statutory Certifying Organization, under the ambit of Ministry of Skill Development and Entrepreneurship (MSDE) and registered under the Societies Registration Act, 1860. The Council has been promoted by the Confederation of Indian Industry (CII), National Skills Development Corporation (NSDC) and Healthcare Industry Leaders representing both public and private sector. The key objective of the Council is to create a robust and vibrant eco-system for quality vocational education and skill development in Healthcare space in the country. Kalinga Eye Hospital, Dhenkanal is affiliated by Health Sector Skill Council of India for conducting one year full time “Vision Technician” training programme. Post affiliation, the courses started from 1st January 2019 and in the first batch, 40 students have got admitted for the course. During the training period, these students have got theoretical knowledge, as well as practical knowledge by attending the patients at the base hospital, outreach eye screening camps, ASHA & School Teachers training Programme and have also exposed to School Eye Screening programme. These students have also visited the Vision Centres and other eye hospital as an exposure visit learning programme and have also learned using different ophthalmic

equipment. One of the key challenges in community ophthalmology was shortage of

technical staffs; as a result ophthalmic services are still inaccessible and unavailable for many communities in the state. Through this programme Kalinga Eye Hospital has created work-ready and skilled professionals required for the demanding and dynamic healthcare industry and better community ophthalmic services can be ensured in future.

LIC Eye Camp:

On the 150 anniversary of the LIC of India, the LIC office of Dhenakanal has requested Kalinga Eye Hospital, Dhenkanal to conduct an eye screening camp for the employees and the beneficiaries of the LIC in Dhenkanal. So a specialised eye treatment camp was conducted on 6th September 2019 at the LIC office of Dhenkanal; the team was headed by the

Chief Medical Officer Dr Rasananda Garnayak. The team had screened 351 persons on the day and out of the 351 people who the check up done, 5 of them had had their Cataract operated and IOL lens was fixed, 14 of them were provided with single vision Lenses, 31 were provided with power lenses.

Eye Screening camp on Independence Day.

On 73rd Independence Day of India, Kalinga Eye Hospital, Dhenkanal and the Rotary Club of Dhenkanal has conducted an exclusive health camp for the senior citizen of the district. The camp was organized at the Binodan Bhawan of Dhenkanal and special team of health experts were invited to provide treatment to the visitors of the camp. As eye screening was also a part of the programme, so Dr Rasananda Garnayak and his team has also attended the camp and has screened 143 people for different kind of eye problems; of which 27 were diagnosed with operable cataract stage, 66 have advised with refractive correction and 83 people were supplied with ophthalmic medicines. Dr Arun Kumar Sahoo, Cabinet Minister, Higher Education, Agriculture along with the District Magistrate, Dhenkanal Bhumesh Chandra Behera, has visited the Health camp and appreciated the efforts been taken for the health benefit of the society.

Creating Eye Care awareness in the community

About eight percent of blindness in India is due to glaucoma. It is the second leading cause of blindness and leads to irreversible blindness with 1.2 million affected people and 1.2 million blind due to glaucoma,” said Kalinga Eye Hospital, Medical Director Dr. Chandra Sekhar Sahoo. On the occasion of World Glaucoma Week starting from March 11 to 17, a glaucoma awareness rally was organised by Kalinga Eye Hospital from Baji Chowk to Kalingan Eye Hospital here on Sunday, 16th March 2019. Addressing the gathering, Dr Sahoo said more than 90 percent of glaucoma was undiagnosed in the country. “We do not

have any symptoms of it at early stages. Every citizen above 40 years of age need to get checked for any evidence of glaucoma every six months,” he added. He said that free consultation would be offered for people above 50 years this week and appealed them to get their eyes tested which will avoid blindness occurred due to glaucoma. The rally was flagged off by the Director Dr. Sarangadhar Samal and the Chief Medical Officer Dr Rasananda Garnayak. Staffs of Kalinga Eye Hospital, NYSASDRI, NYSASDRI School of Journalism and Social Work have taken part in the rally.

Responding to Adversity

In the aftermath of Fani cyclone in Puri district, Kalinga Eye Hospital had organized eye screening camps. Visualizing the disruption of Health services in Dugal and Sarangajodi panchayats, NYSASDRI had organized health camp, free medicine distribution and awareness camps in two central points of the above panchayats on 10th & 11th October'19 respectively.

At Narangapatana of Sarangajodi panchayat the camp was organized on 10th October and in Dugal village the camp was held on 11th Oct'19. A team of medical professional/personnel comprising of medical officer, optometrist, vision technician, paramedics had assessed the health issues of total 234 patients of two panchayats, who were enrolled in the camps.

Prior to the conduct of camps in both points, mike announcement was made in the surrounding villages to inform the target groups for eye health consultation. Medicines were distributed to a total 202 patients for common ailments and spectacles were distributed to 90 persons who were identified with ophthalmic problems.

Besides the eye health assessment, health awareness was conducted on the prevention of water borne and vector borne disease like diarrhea, Jaundice, typhoid, malaria, common cold and cough etc. The communities were oriented to use chlorinated water for drinking. Importance of Hand wash was also explained to the masses.

Towards improved patient care through IHMS:

To maintain the valuable patient data for providing better information system, the Integrated Hospital Management System, was installed at Kalinga Eye Hospital in June 2019. This IHMS insists on standardizing the workflow, patient flow and various activities, which enhance overall performance of the organization. Through Intranet services, management will have access of online information about key factors. Cataract surgical outcome monitoring system

helps to assess the outcome of the service provided and also improve one's competency. So with this system installed the management team of Kalinga Eye Hospital is very much excited by going one step further in helping patients and their families in providing even better quality ophthalmic services to its patients that to in lesser time.

Eye Screening camp at Blind School:

To eradicate the avoidable blindness from Paediatric age group, Kalinga Eye Hospital is taking many initiatives and amongst which re-screening the children enrolled in different Blind Schools of the state is one of them. As a part of the programme and eye screening camp was conducted at the Blind School in Dhenkanal where 62 children are enrolled. A team lead by the Paediatric trained Optometrist Mr Ajit Kumar has conducted the screening camp on 17th September 2019. With the support from the School,

all the enrolled children were screened; from which 6 children were diagnosed with operable cataract and 4 children were found in Low Vision Category. The report was submitted at the school with a request to intimate the parents and bring them to Kalinga Eye Hospital, Dhenkanal so that the sight of these identified children can be restored.

Towards ensuring universal coverage in Eye Care

Many Eye care providers in our country have long struggled with the issue of extending care to all those in need. While patients from rural areas can be reached through eye camps, studies show limited attendance; less than 7% of those in need of eye care in the targeted population attend an eye screening camp. Through the vision centre concept, the penetration is much higher. Kalinga Eye Hospital vision centres have been able to reach more than 90% of those who need care within four years. Of these patients, over 90% can be fully treated on-site, and the rest are referred to the base hospital for further treatment, either for surgery or advanced investigations. With this concept, Kalinga Eye Hospital has five vision centre in two different

districts, of them three are in Govt set ups and other two in rented buildings. The three Vision centre in Govt set up are located at Sriramchandrapur CHC, Bhuban CHC and Raj Kishorenagar CHC, where as Athamallik and Khajuriakata Vision Centre are running in rented buildings. The focus of these centres will be in achieving universal coverage in eye care and ensure quality in eye care that will help these centres to gain the trust from the community which will in turn growth of both the centres. Through these centre, in last calendar year only we could treat 8009 people directly otherwise these people had to travel to Kalinga Eye Hospital by wasting their one day wage and other expenses to treat their eyes.

Volunteering at Kalinga Eye Hospital

**Nandini Soni, U.S.A,
September 09-16, 2019**

**Priya Chopra, U.S.A,
September 09-16, 2019**

**Marsha Gershon, U.S.A,
January 01-07, 2019**

Volunteers from diverse backgrounds, professional photographers, medical students, undergraduates, and professionals from all over the world come visit Kalinga Eye Hospital to extend their support in the field of community ophthalmology. This opportunity is a unique chance for volunteers to explore Odisha while learning about the barriers to healthcare in the region, all while lodging at Kalinga Eye Hospital along with the paramedic staff members, which allows them to become fully immersed in the life of the hospital. This year, 3 volunteers have joined hand with Kalinga Eye Hospital on a variety of activities.

Confirmative Eye Screening Camps

Considering the fact that 30% of India's blind lose their sight before the age of 20 years and many of them are under five when they become blind, the importance of early detection and treatment of ocular diseases and visual impairment in young children is obvious. Vision problems affect one in 20 preschoolers and one in four school age children. During a child's first 12 years, 80% of all learning comes through vision, and yet most children have not had a comprehensive eye examination after the birth or prior to starting school. Majority of students identified as problem learners have undetected vision problems.

Prevalence of refractive error (visual acuity $<6/9$) among children could be as high as 5% according to an estimation made by the Government of India. Refractive error in children, if untreated, almost always leads to poor academic performance and results in students dropping out of their education system. Refractive error in children can easily be corrected by providing a pair of spectacles. As 75% of the population lives in the rural areas, the same proportion of children who are blind or have significant refractive errors would be living in the

rural areas where no pediatric eye care or refraction services are available. So to detect these children early, Kalinga Eye Hospital has developed the skills of the school teachers in identifying children with eye problems; even the teachers are provided with a scientifically designed eye screening KIT. After the training, the teachers have identified 7921 children with ophthalmic ailments and out of them 6863 have attended the confirmative eye screening camps. In these confirmative eye screening camps ophthalmic technical persons have screened these identified children and provided treatment accordingly. So far 2032 children are provided with refractive corrected glasses too. This time, trendy, light weight frames with fibre glasses spectacles were provided to the children.

Reducing Childhood Blindness

Globally, blindness in children is responsible for only 3% of all blindness. However, childhood blindness is important because of the number of years that a child has to live with visual disability compared to an adult. Therefore though adult onset blindness is much more common, life expectancies across the developing countries being in the range of 50-70years, the number of “life years with disabilities” is far higher for children. An Adult going blind at the age of 50 years can look forward to another 10-20 years of productive years of life if left untreated, while a child today will still be alive with disability in 2050AD even if the current rate of life expectancy continues. The concept of “Blind years saved” is very useful in arguing for allocation of resources for childhood blindness because restoring the sight of one child with Paediatric cataract is equivalent to restoring sight of 10 elderly blind cataract individuals.

Opportunities for education, employment and earning potentials are severely affected; also early onset blindness adversely affects the psychomotor, social and emotional development of children. So reducing childhood blindness is one of the major objectives of the institution and in 2019 alone Kalinga Eye Hospital has conducted 124 no of surgeries on children free of cost.

Helping restoring sight

There are a few non-profit global health delivery organizations who have joined hand with Kalinga Eye Hospital in restoring sight to people in need, such as, Sightsavers, Unite for Sight, Vision Foundation of India and DCI, USA. These groups partner with KEH to provide comprehensive ophthalmic care and education about preventative measures through conducting outreach eye treatment camps. Many patients in Odisha cannot access eye care because of a variety of reasons, such as lack awareness or transportation, loss of wages, or lack of need. To work around these barriers to care, outreach camps were designed to help patients restore their sight.

Outreach camps are conducted in a radius of about seven hours from the clinic in the local villages to minimize patient travelling. Patients from these camps who need surgery are transported back to the hospital for treatment and once surgery is done, patients are counselled about postoperative care and are dropped back at their respective villages and regularly provided with follow up care by our outreach teams. This year, 7265 adult patients were provided with free sight-restoring cataract surgery, supported by these International NGOs

Involving ASHA in Eye Care:

Ever since the National Health Mission (NHM) aiming at architectural correction of health system in India has been launched, the health systems have witnessed great improvement. Community level volunteers like Accredited Social Health Activist (ASHA) workers if appropriately trained and sensitized, could be tapped for channelling patients to avail primary eye care services in local vicinities and their work can be supervised by the PMOAs and MOs. With this model, Kalinga Eye Hospital has approached the District Health Officer of Deogarh and Angul district and convinced them of the need for

intervention. 283 ASHAs from Deoagrh district were trained in the month of February where as 450 ASHAs of Angul were trained in August 2019. These ASHAs are trained on identifying people with ophthalmic ailments, counselling-sensitizing them about the importance of eye care and nearby referral centres for treatment as quick treatment for amount of vision can be saved/preserved. These ASHA's were provided with a scientifically designed Eye Screening KIT. The trainings were conducted at different CHCs of the district.

Eye camp for Elderly people on IDOP

Kalinga Eye Hospital organized a free eye screening to create awareness on ophthalmic problems in older age and its effects on the body on International day of Older persons (IDOP), that is on 1st October 2019 at the District Head Quarter Hospital, Deogarh and at the meeting hall of Panchayat Samiti house, Talcher. The team of doctors participated in the program wherein free eyes, Blood pressure, Refractive error, height & weight check-ups were done for all attendees on the occasion. Around 1000 patients attended the camp for free check-ups, in both the locations. Speaking on the occasion, at Talcher, Dr Rasananda Garnayak, Chief Medical Officer, Kalinga Eye Hospital said, International day of Older persons is observed every year on 1st October to recognize the contributions of older persons and to examine issues that affect their lives, but being in ophthalmic sector, we have come up with this plan of taking care

of the eyes of our elderly people in the society. Now Cataract & Diabetic retinopathy is one leading cause of blindness and vision impairment. Vision problems are common in people of all age groups but the severity is more in elderly people. Elderly people get vision defects as their age grows and development issues related to sight. Thus they need long-lasting and approachable treatment. Diabetes is one of the important factors which will lead to diabetic retinopathy, if not treated in time may lead to vision impairment. Such kind of special day is not just a one-day event but it is an initiative which inspires to help the world around us. As a gesture towards all such eye complications in the society, and to rekindle the hope in all the patients suffering from eye-related diseases.
